# 1    Introduction

The release of Veterans Health Information System and Technology Architecture (VistA) Registration, Eligibility & Enrollment (REE) Host File DG_53_P998.KID, which includes Registration (DG) patch DG*5.3*998 and Income Verification Match (IVM) patch IVM*2.0*192, supports the enhancements for the Enterprise Health Benefits Determination (EHBD) program that focuses on updates for the Enrollment System Modernization (ESM) Phase 3 project, which supports Enrollment System Community Care (ESCC) and Enrollment System (ES) Sustainment.

# 2    Purpose

The Release Notes cover the changes to VistA REE DG and IVM systems for this release.

# 3    Audience

This document targets users and administrators of VistA REE and applies to the changes made between this release and any previous release for this software.

# 4    This Release

This multi-package build is distributed as a Host File. Refer to the Software and Documentation Retrieval Instructions section of the patch descriptions for information on obtaining the Host File DG_53_P998.KID and related documentation.

The following sections provide a summary of the enhancements and modifications to the existing software for VistA REE with the release of patches DG*5.3*998 and IVM*2.0*192.

## 4.1 New Features and Functions Added

There are no new features or functions added to VistA REE for DG*5.3*998 and IVM*2.0*192.

## 4.2 Enhancements and Modifications

**DG*5.3*998**

Patch DG*5.3*998 modifies the HEALTH BENEFIT PLAN file (#25.11) to store five new core VHA Profile names, codes, and short and long descriptions to support the Electronic Health Record (EHR) in Cerner's Millennium application.

In order to align with Cerner Millennium, patch DG*5.3*998 renames 9 VHA Profiles and updates 38 existing VHA Profile names, codes, and short and long descriptions. VistA will accept the new profiles from ES via Health Level Seven (HL7) ORF-Z11/ORU-Z11 messages.

Two existing VHA Profiles are set as inactive.

**IVM*2.0*192**

Patch IVM*2.0*192 modifies VistA processing of HL7 messaging when receiving foreign address data from ES for patient associate contacts (Next of Kin, Next of Kin 2, Emergency Contact, Emergency Contact 2, and Designee).

Patch IVM*2.0*192 modifies the processing of the ZCT segment in the ORU-Z05 HL7 messages. The CONTACT ADDRESS (SEQ 5) is checked for the presence of the Country field (component 6 of the CONTACT ADDRESS). If the Country field has a value and it is not "USA", the address is not stored.

The foreign address capability for contact information is added with ES 5.12. This patch is being released to mitigate Z05 HL7 message filing issues. VistA will not support the contact foreign address until DG*5.3*997 is released. If a contact sent from ES contains a foreign address, the address will not be uploaded until DG*5.3*997 is released and installed at the site.

Table 1 shows the enhancements and modifications included in the DG_53_P998.KID release as tracked in Rational Team Concert (RTC) Requirements Management (RM).
